

AIMS trên OCI Landing Zone

Multi-OE Generic v1 • OE01 đầu tiên • Hub B • Regional WAF • OKE 3 private workers

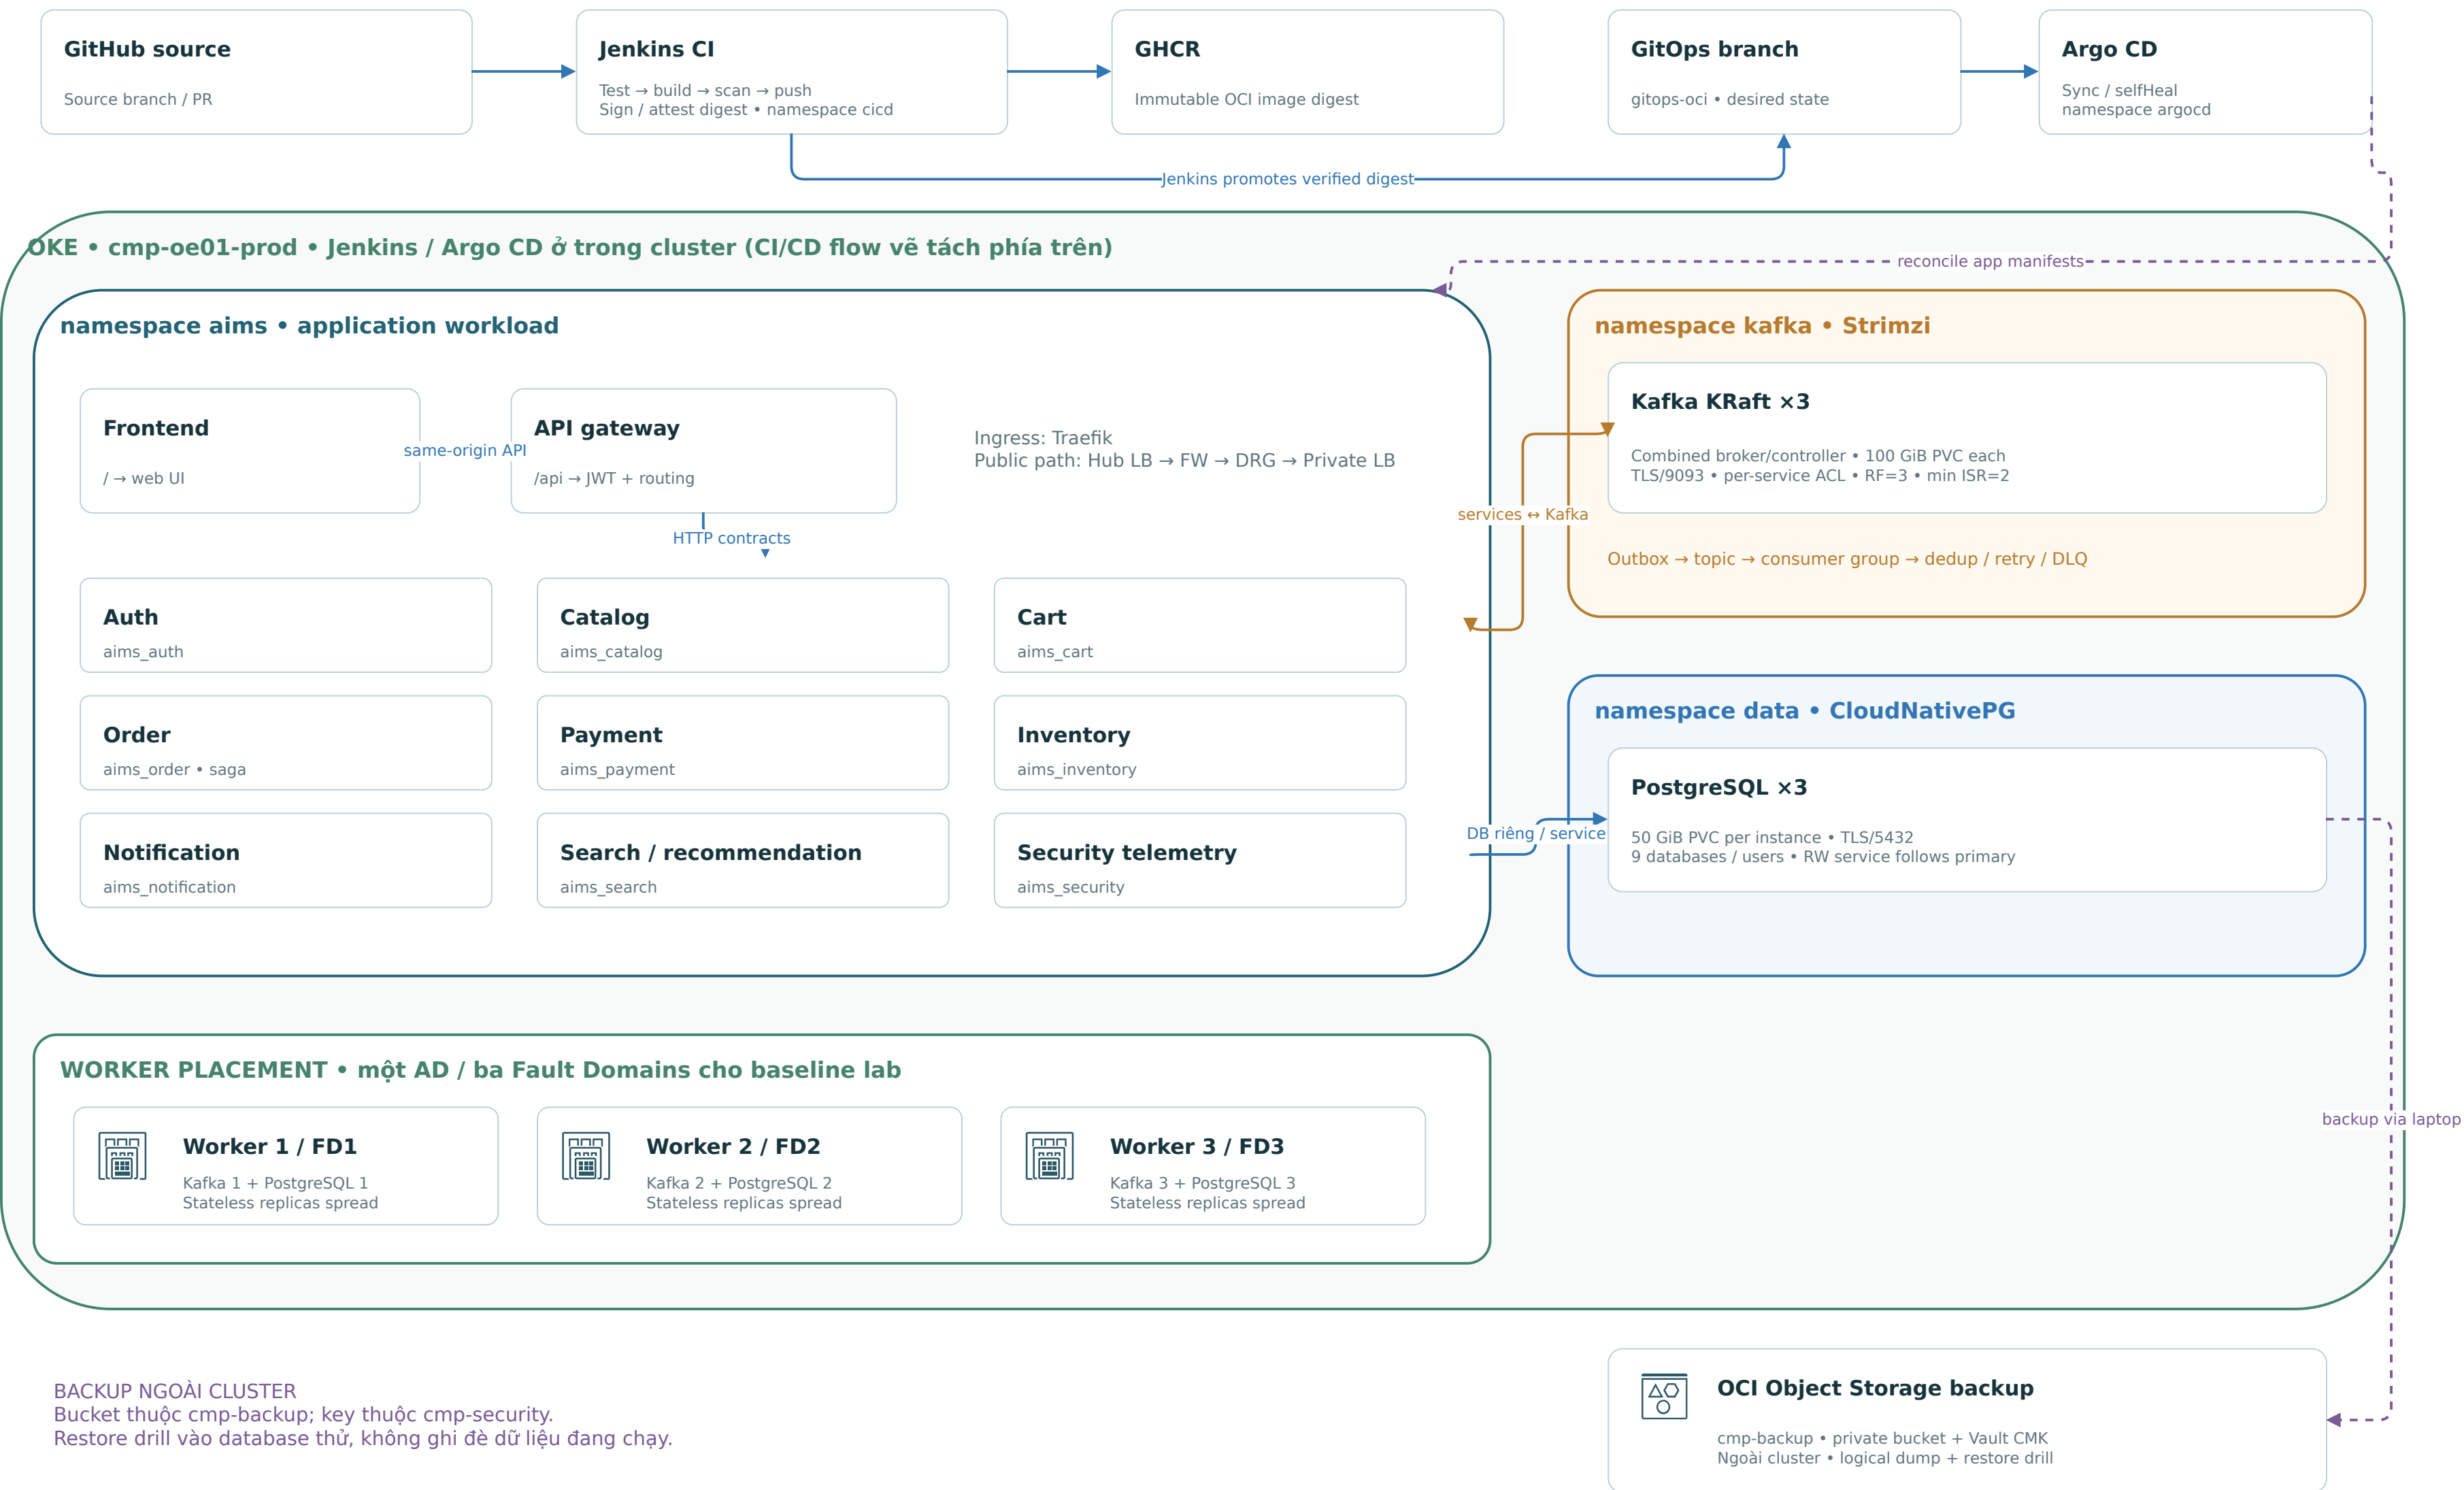

Hub B — đường đi và đường về

VCN route table và DRG route table là hai lớp khác nhau • Static routes cho lab • Không dùng IGW ingress interception

AIMS — nền tảng ứng dụng trên OKE

Source/build artifacts là đầu vào • Namespace tách trách nhiệm • Database ownership và Kafka ACL riêng mỗi service

Saga: Order → Inventory → Payment → Order → Notification; payment failure → release inventory.
Jenkins agents chỉ build; Argo deploy ứng dụng. Kafka/DB/operator/ingress bootstrap bằng Helm/manual.
